Say Goodbye to Costly Migrations

Windows 10 is here, and it's time to say goodbye to painful, time-consuming, and costly migrations

While Windows 10 has taken off for consumers, it's not without its challenges for enterprise IT. Windows 10 brings with it a new type of user profile to manage, continuous product updates, universal applications, and much more. Whether your users are requesting it or not, it will soon be time to accept that another migration is just around the corner.

With Ivanti, you can say goodbye to painful, time-consuming, and costly Windows migrations. Ivanti® User Workspace Management solutions simplify and reduce the cost and complexity of any desktop transformation project including Windows 10 – while ensuring optimal user experience and increased levels of productivity.

The days of going a decade between major migrations are over. With Microsoft's shift to a faster OS release cadence, IT teams face the constant pressure of running multiple Windows versions in parallel, in addition to operating in a continuous state of migration. Ivanti moves user personalization, files, and settings between disparate Windows operating system versions – automatically. From the moment a user first logs in, they are presented with a familiar desktop environment, which means a better user experience, instant productivity, and fewer helpdesk calls.

"During Windows migration, we expanded the number of users, which was much easier because a lot of the standardization – and user settings – were taken care of by Ivanti. We planned on the equivalent of one full-time employee for the migration process. By using Ivanti we saved this resource."

So How Do We Make Windows Migrations Less Painful?

Ivanti provides a simple, centralized, and managed solution for migrating user profiles and data from their existing Windows XP, Windows 7, and Windows 8 desktops to the modern desktop of Windows 10. Ivanti User Workspace Manager decouples all aspects of the user from the underlying desktop, operating system, and hardware. Now user personalization and settings flow automatically between OS versions and user files follow them to their new desktop automatically without the need for manual file location and copy efforts by IT.

IT departments can apply policies to control the environment and ensure that a consistent user experience is delivered to each user regardless of how their desktop is delivered—physical, virtual, or in the cloud. Ivanti is equally effective whether you have yet to begin your migration or are currently in the middle of the process with its accompanying challenges.

Windows Migrations Made Simple

Ivanti enables an effortless, consistent migration to Windows 10, and reduces support calls. Users receive the same experience across all their Windows devices: bring-your-own-device (BYOD), physical, or virtual (VDI).

Security Becomes the Norm, Not the Exception

Ivanti helps you enforce least privilege rights without degrading the user experience.

Workspace Delivery Stack

Simple, Secure User Data Management

Ivanti® File Director enables simple, secure access, sync, and sharing of your enterprise files, no matter where they live. It makes existing storage locations like file servers and Microsoft SharePoint easily accessible from any device and keeps users' files in sync at all times.

Unprecedented Visibility into Endpoint Environments

Ivanti® Insight enables IT teams to fully understand exactly what's happening on their endpoints before the migration. You'll have a granular understanding of the individual components of logons, including group policy, application usage, printer and drive mapping, scripts, and post-logon actions.

Control the Hybrid Cloud, Now

Ivanti creates consistent user experiences between physical, virtual, and cloud-delivered desktops. Ivanti has cloud-critical features built in, like application whitelisting, application privilege control, and mitigation of zero-day exploits.

Ready for the Future, Now

Ivanti provides a platform for your future Windows 10 deployments. Create pilot environments to test benchmarking, tracking, application usage, application administrative issues, legacy application performance metrics, and OpEx forecasting. Know before you migrate.
